

Arbor — HR Operations Engine

The HR and compliance backbone of Project Meridian — keeping people data, pay, leave, and legal obligations under control while Ricoh Thailand moves 2,000 staff through AI transformation, without overloading the HR team.

What Arbor Covers

Eight Pillars of HR Control

01

Employee Records & Workflows

One secure home for all people data

02

Payroll & Leave for Thailand

Accurate, legally grounded pay runs

03

Everyday HR Tasks

Leave, claims, shifts — simplified

04

Performance & Skills

Talent visibility as roles evolve

05

Embedded Legal Guidance

Risk-aware HR advice, always on

06

HR Co-Pilot

Smart assist with human control

07

Compliance & Privacy

PDPA-ready, audit-friendly by design

08

Built to Scale Regionally

Thailand today, Southeast Asia tomorrow

One Place for Employee Records and Workflows

Complete Profiles

Roles, salary, promotions, transfers, documents, and skills — all in one secure system instead of scattered files.

Joining & Leaving

New hires receive contracts and access in a clear sequence. Offboarding tracks assets, final pay, and paperwork automatically.

Staff Self-Service

Employees view their own profiles, payslips, and balances — without routing every basic request through HR.

- ☐ **Meridian objective served:** Frees HR and managers from admin so they can focus on capability building and AI adoption.

Pillar 2

Payroll & Leave That Understand Thailand

Pay runs follow a clear **draft → review → approve → paid** flow, with salary structures, allowances, and deductions handled consistently.

Country-Aware Rules

Thai social security, tax withholding, and statutory leave types — not generic templates.

Clear Payslips & Reports

Itemised payslips for staff; ready-made year-to-date reports for HR and finance — no manual spreadsheets.

Pillar 3

Everyday HR Tasks, Simplified

Leave & Attendance

Online leave requests, one-click manager approvals, and real-time calendars showing who is away. Overtime and off-in-lieu tracked in the same place.

Claims & Expenses

Staff submit claims with receipts attached; managers approve; approved amounts flow directly into payroll — reducing back-and-forth and missed payments.

Shifts & Projects

For service and project teams, Arbor manages schedules, tracks hours, and links time to project or cost centre — showing where effort truly goes.

Meridian objective served: Keeps day-to-day operations running smoothly while people step into new roles and responsibilities.

Pillar 4

Performance, Skills, and Growth in One View

Structured Reviews

Quarterly or annual reviews use standard forms and workflows — self-assessment, manager ratings, and sign-off all captured in the system.

Live Skills Inventory

Each employee's skills are recorded and updated continuously, creating a real-time capability map across Ricoh Thailand.

Future: Deeper Development

Goals, OKRs, and improvement plans will layer on over time — tying directly into the AI Academy and JourneyMate data.

Pillar 5

Embedded HR & Legal Guidance for Thailand

Arbor includes an AI advisory assistant that answers employment questions in plain language — with links to the underlying Thai regulations.

Guidance is classified by risk level so HR knows immediately when a situation is routine and when to pause for professional advice.

- ❏ **Meridian objective served:** Reduces reliance on ad-hoc legal advice for everyday questions and increases confidence in every HR decision.

Pillar 6

A Co-Pilot for HR Ops — With Human Control

Plain-Language Commands

Type "show pending leave approvals" or "start payroll for this month" — Arbor prepares the action instantly.

Human Always in the Loop

Nothing is finalised automatically. HR reviews and approves every action before it takes effect.

Proactive Nudges

Expiring permits, upcoming filings, overdue approvals — Arbor surfaces what needs attention before it becomes a problem.

Pillar 7

Compliance, Privacy, and Trust by Design

Every aspect of Arbor is built to meet Thailand's PDPA requirements and Ricoh's internal data standards — security is a default, not an afterthought.

→ PDPA-Ready Behaviour

Access to sensitive data is logged, key fields are encrypted, and role-based controls govern who sees what.

→ Security as Default

Modern sign-in, brute-force protection, and company data isolation keep Ricoh's records separate and safe.

→ Audit-Friendly Reporting

Compliance views and downloadable reports make internal and external audits straightforward to respond to.

Pillar 8

Ready to Grow Beyond Thailand

Multi-Country Roadmap

Singapore is live. Thailand is planned. Malaysia, Vietnam, Indonesia, and the Philippines follow — a clear regional expansion path.

Integration-Ready

Planned connectors to accounting systems, communication tools, and government portals let Arbor sit cleanly inside Ricoh's wider digital stack.

Mobile Access

A mobile app brings leave, claims, and key HR information into employees' pockets — supporting frontline and field staff wherever they work.

📄 **Meridian objective served:** Gives Ricoh Thailand an HR engine that can later be offered as part of the Meridian suite to regional clients — not just used internally.

How Arbor Serves Project Meridian

Every feature directly supports Ricoh Thailand's transformation goals — freeing HR capacity, reducing risk, and building the talent data foundation the AI shift requires.

Arbor in One Minute

Arbor is Ricoh Thailand's HR operations engine — a single, secure system that manages employee records, runs compliant payroll, handles leave and claims, tracks skills, and gives HR an AI co-pilot with human control. It is built for Thai law, designed for PDPA compliance, and ready to scale across Southeast Asia. During Project Meridian, Arbor ensures the HR function never becomes a bottleneck as 2,000 people step into new, AI-enabled roles.

Recommended Actions

Suggested Next Steps

1

Schedule a Live Demo

Walk HR and finance leaders through payroll, leave, and the AI co-pilot in a working environment using Ricoh Thailand's org structure as context.

2

Confirm Thai Law Scope

Align with the Arbor team on the exact timeline for Thai social security, tax, and statutory leave coverage in the live system.

3

Map Integration Points

Identify which accounting systems, communication tools, and government portals need connectors to make Arbor a seamless part of the Ricoh digital stack.

4

Define a Go-Live Milestone

Set a target date for Arbor to be operational for Thailand, aligned with Project Meridian's broader transformation timeline and first AI Academy cohort.
